## SUMMARY

Full stack developer shipping production TypeScript: React 19 and Next.js 16 on the frontend, Node.js, Express, Prisma and PostgreSQL behind it. Currently building a live travel-booking platform of a public site, an admin CMS and an agent CRM.

## TECHNICAL SKILLS

**Languages:** TypeScript, JavaScript (ES6+), SQL, HTML5, CSS3

**Frontend:** React 19, Next.js 16 (App Router, Server Components, SSR, SSG), Redux Toolkit, Tailwind CSS, Framer Motion, Vite

**Backend:** Node.js, Express, REST APIs, Prisma ORM, Mongoose, JWT with refresh tokens, RBAC, Joi validation, webhooks

**Data and Cloud:** PostgreSQL, MongoDB, Redis, AWS S3, AWS EC2, PM2, Cloudflare, Vercel

**Tooling:** Git, GitHub, GitHub Actions, CI/CD, Postman, ESLint, SEO (sitemaps, metadata, internal linking), caching

**Integrations:** Easebuzz payments, Telnyx SMS, Nodemailer, Google Gemini API, Meta Conversions API

## WORK EXPERIENCE

**Full Stack Developer**, Atravelq, Mohali, India — Mar 2026 - Present

- Build across a TypeScript suite: a Next.js 16 site, a React and Vite admin and agent CRM, and an Express, Prisma and PostgreSQL API of 94 data models and 39 route modules; review pull requests from teammates in all three repositories.
- Owned the Sightseeing module end to end: Prisma schema, Joi validation, services, controllers and routes, plus the server-rendered listing and detail pages with search and city carousel.
- Built bulk-import APIs for destinations, packages and blogs keyed on slugs, not database IDs, so one file loads into staging and production unchanged.
- Added payment-based conversion and daily invoiced KPIs to the CRM dashboard, fixing a double count caused by UTC day bucketing, and made every KPI tile click through to its filtered list.
- Built the quotation follow-up, create-quote and saved-itinerary modules of the agent CRM, plus a booking-inquiry drawer.
- Cached authenticated user data in Redis on login and token refresh, cutting a repeated database read from every authenticated request.

**Full Stack Intern**, Deftsoft, Chandigarh, India — Jan 2024 - Jul 2024

- Built reusable React components and responsive interfaces for internal web apps and integrated REST APIs with Axios under senior developer review.

## PROJECTS

**Senticenia, AI-Powered Movie Discovery Platform** — GitHub | Live Demo

*React, Redux Toolkit, Node.js, Express, MongoDB, JWT, TMDB API, Canvas API*

- Built a 14-route full stack app with JWT auth, role-based admin routes and Redux Toolkit state on MongoDB, and cut redundant TMDB calls 85% with debounced search and infinite scroll.
- Wrote a browser-only mood detection engine on the Canvas API, mapping pixel brightness and motion to genre recommendations, with no external ML dependency.

**Proofly, GitHub for Every Profession** — Live Demo

*React, Node.js, Express, MongoDB*

- Placed 36th of 2,989 participants in the OpenAI x NamasteDev Codex Hackathon (Jul 2026), selected as a top-50 project out of thousands of submissions.
- Built the platform with one teammate in five days: people outside engineering log daily work with evidence and publish a public, verifiable profile of it.

## EDUCATION

**M.Tech, Computer Science**, SVIET, Banur, Punjab. CGPA 8.0 — Expected Jun 2026

**B.Tech, Computer Science**, I.K. Gujral Punjab Technical University. CGPA 8.2 — Aug 2020 - Jun 2024
